

Threshold 12-0-0-6

Information

Threshold 12-0-0 is a highly effective foliar nitrogen and micronutrient formulation designed to prevent and correct Iron and Manganese deficiencies. It should be applied in adequate water for coverage during periods when plants or grass are growing rapidly.

Directions For Use

Turf Grass: Apply 2 to 6 ounces per 1,000 square feet as a drench or foliar application. Repeat as needed to maintain desired color and health. Use with adequate water to ensure good coverage. Threshold 12-0-0 has a pH of 2 and will therefore buffer your spray water when added to spray tank first. It is also compatible with most crop protection chemicals, micronutrients and growth regulators, but for unfamiliar combinations use a "jar compatibility" test with correct equivalent rates of all products to be used.
