

Threshold All-Purpose Turf Micronutrient

Information

Threshold All-Purpose Turf is a concentrated aqueous solution of micronutrients in combination with glucoheptonates (7 carbon sugars), a natural organic chelating agent designed to increase the uptake of nutrients and to prevent and correct micronutrient deficiencies in turf.

Application Rates

Turf: Apply 2 to 6 ounces per 1000 square feet. Repeat as needed. A minimum of 20 gallons of water per acre is recommended for ground application or 5 gallons of water per acre if air applied. When applying at minimum water rates, the use of pH+ at 1 quart per 100 gallons of water will eliminate compatibility problems, lower water pH and aid in surface coverage and leaf absorption.
